

# PRTG Network Monitor – the Solarwinds alternative

One solution for all  
your monitoring needs

Complex IT environments require simple solutions to maintain an overview. Other than Solarwinds, **PRTG Network Monitor delivers all monitoring functionality in a single application** – from network, IT infrastructure, storage systems, cloud applications, virtual systems, databases and applications to medical devices, CCTV systems, industrial environments and more.

The full range of functions  
with every license

All this comes without add-ons or modules: **Each license includes the full feature set.** Licensing is based only on the number of sensors. A sensor is what others might call a monitor or a check – it delivers data on one aspect of your IT. As a sensor contains multiple channels, it delivers more than just one value, but e.g. the CPU performance including the performance of all cores, or different metrics when monitoring a port.

Enterprise level monitoring

Each license of PRTG includes unlimited remote probes (polling engines) to monitor **distributed locations or scale for large environments.** PRTG Enterprise Monitor also includes the ITOps Board – an IT service- based dashboard optimized for very large environments.

Switching to PRTG is easy

**PRTG is optimized for quick and easy use. This applies to installation and setup as well as daily operation:**

- Installation in a few minutes
- Auto-Discovery and Smart Setup
- Individual dashboards via drag & drop
- Windows GUI, web interface and apps for iOS and Android

A huge network of highly qualified implementation partners is ready to support you with a smooth migration to PRTG.

## Going beyond monitoring: The Uptime Alliance

With the Uptime Alliance, **Paessler has established a strong partner network** that offers solutions for IT management, automation, and IT security. Based on its API and custom sensors, PRTG integrates with partner applications, building comprehensive solutions for monitoring and beyond.

- **UVexplorer:** Advanced mapping, inventory and configuration management

## Full Solarwinds replacement?

With its different approach, PRTG can probably not replace every Solarwinds application or module one-to-one. But there is **high feature coverage for a large number of Solarwinds tools like:**

- Network Performance Monitor
- Server & Application Monitor
- Storage Resource Monitor
- Database Monitor
- Web Performance Monitor
- Network Traffic Analyzer
- ipMonitor
- There are also many overlaps with other Solarwinds tools, ask us for details.

**PRTG monitors your entire IT and more in one single application**, easy to manage with clear dashboards and mobile apps to keep you informed wherever you are. At a price that will surprise you.

## Interested? Contact us!

**You are interested to know if PRTG could be an alternative to your Solarwinds implementation?**

Contact us for more information or ask a PRTG expert in your region:

“ With Solarwinds, Cacti and SNMPC we needed three different monitoring systems to gain overview about all our systems and devices. Finding out that PRTG was able to replace all three tools was a huge additional benefit for us and helps us to save a lot of time and money.”

Stein Erik Høybakk, Senior Network Engineer at TAFJORD
